differential equations chapter 1 6 w student solutions manual de tools cd rom differential equations with cd rom Chapter 1 Differential Equations. A differential equation is an equation of the form  $y'(x) = f(x, y)$ , usually with an associated boundary condition, such as  $y(0) = 0$ . The solution to the differential equation,  $y(x)$ , contains no differential in  $x$ .

Differential equations that are not linear are called nonlinear equations.

Introduction; Basic Terminology Recall that a first order linear differential equation is an equation which can be written in the form  $y' + p(x)y = q(x)$  where  $p$  and  $q$  are continuous functions on some interval  $I$ . A second order linear differential equation has an analogous form.
