physics by douglas c giancoli 6th edition Time in physics is defined by its measurement: time is what a clock reads. In classical, non-relativistic physics it is a scalar quantity and, like length, mass, and charge, is usually described as a fundamental quantity. Time can be combined mathematically with other physical quantities to derive other concepts such as motion, kinetic energy and time-dependent fields.

physics by douglas c giancoli 6th edition You might well think that the Sun can warm the surface to the observed temperatures with its direct radiation. However, when we consider the whole globe and the average intensity of the Sun's radiation, the amount of cloud cover and the incident radiation absorbed by the atmosphere, the laws of physics tell us that the remaining solar radiation just simply is not enough.
